Removals are quoted on the total cubic volume your household items will occupy. Vol = width x depth x height
Our estimators still like to use cubic foot as it is easier to estimate by eye. But you can send in volume in cubic metres if you like.

For your convenience we have provided typical cubic foot volumes (Vol) for common household items. Multiply the number of items you have by our average figure and you will provide enough information for our quote. Don't worry if items are not listed in the proper room. Just list the quantity on the form where you can.

Any Problems? Just pick up the phone and we will talk you through it.

Living Room			
Item	Qty	Vol	Total
